

# DeepSeek Top-5 Strict Comparison

This report separates three different result types so the earlier DeepSeek stock winners are not mixed with the later strict unseen-test branch. The earlier window averages are context only. The apples-to-apples comparison is strict exact prompt variant vs strict fine-tuned meta-model.

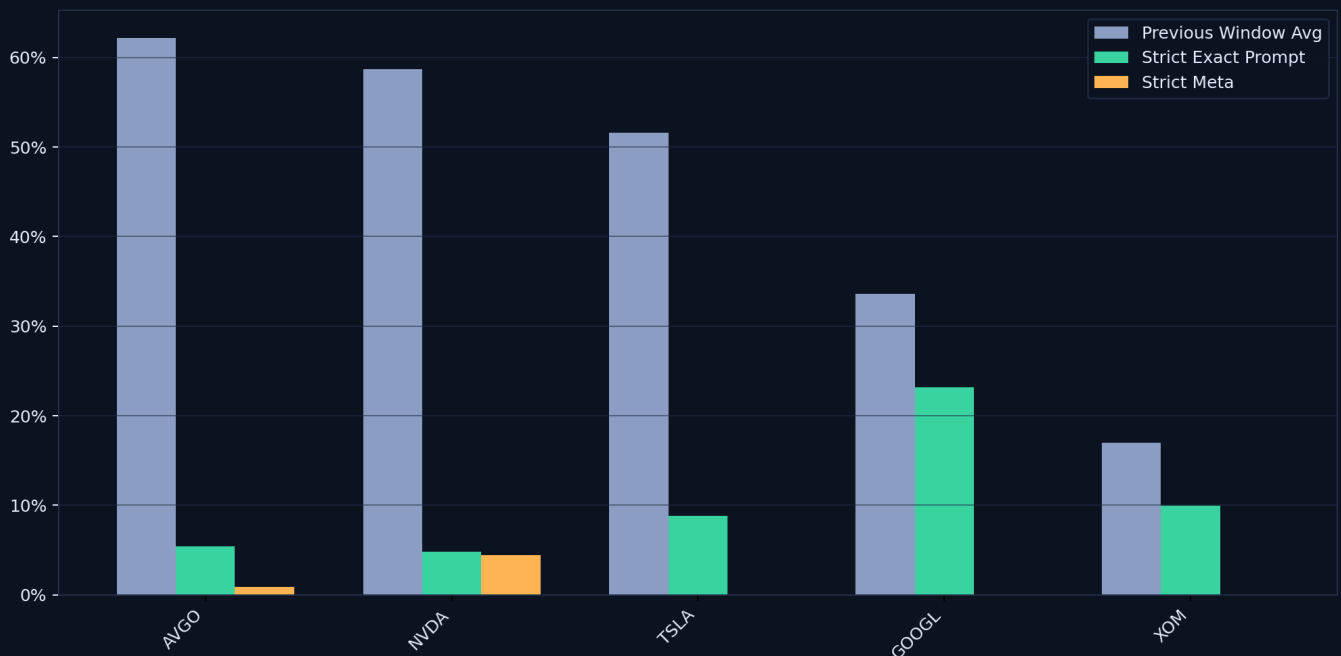

## Headline

- Earlier DeepSeek top-5 multi-window average mean return: 44.60%
- Strict exact-variant mean return: 10.43%
- Strict meta-model mean return: 1.06%
- Strict prompt variant beat the strict meta-model on 5/5 symbols.

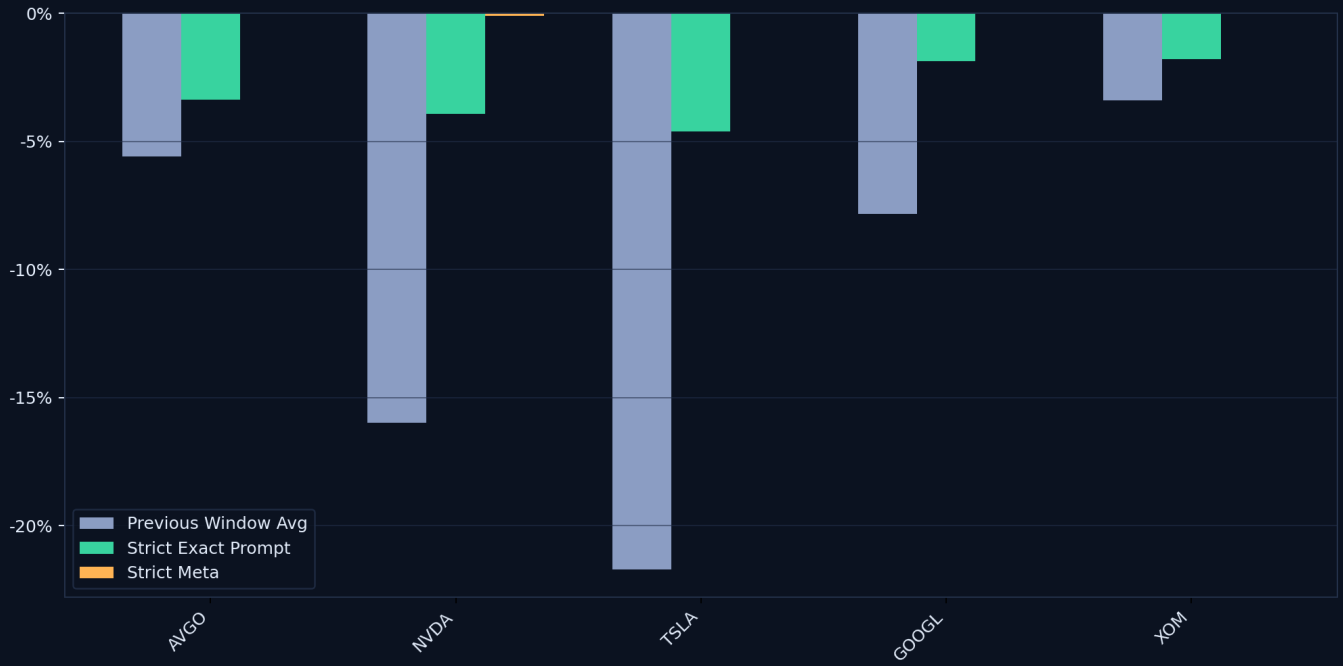

## Comparison Table

| Symbol | Prior Winner      | Prev Avg Return | Prev Avg DD | Strict Prompt Return | Strict Prompt DD | Strict Meta Return | Strict Meta DD |
|--------|-------------------|-----------------|-------------|----------------------|------------------|--------------------|----------------|
| AVGO   | avgo_entry_filter | 62.16%          | -5.59%      | 5.39%                | -3.36%           | 0.87%              | -0.01%         |
| NVDA   | nvda_exit_filter  | 58.70%          | -15.98%     | 4.83%                | -3.92%           | 4.41%              | -0.11%         |
| TSLA   | tsla_exit_filter  | 51.56%          | -21.70%     | 8.80%                | -4.61%           | 0.00%              | 0.00%          |
| GOOGL  | googl_exit_filter | 33.57%          | -7.84%      | 23.18%               | -1.86%           | 0.00%              | 0.00%          |
| XOM    | xom_exit_filter   | 17.00%          | -3.41%      | 9.95%                | -1.81%           | 0.00%              | 0.00%          |

DeepSeek Top-5 Stocks: Previous Window Average vs Strict Exact vs Meta

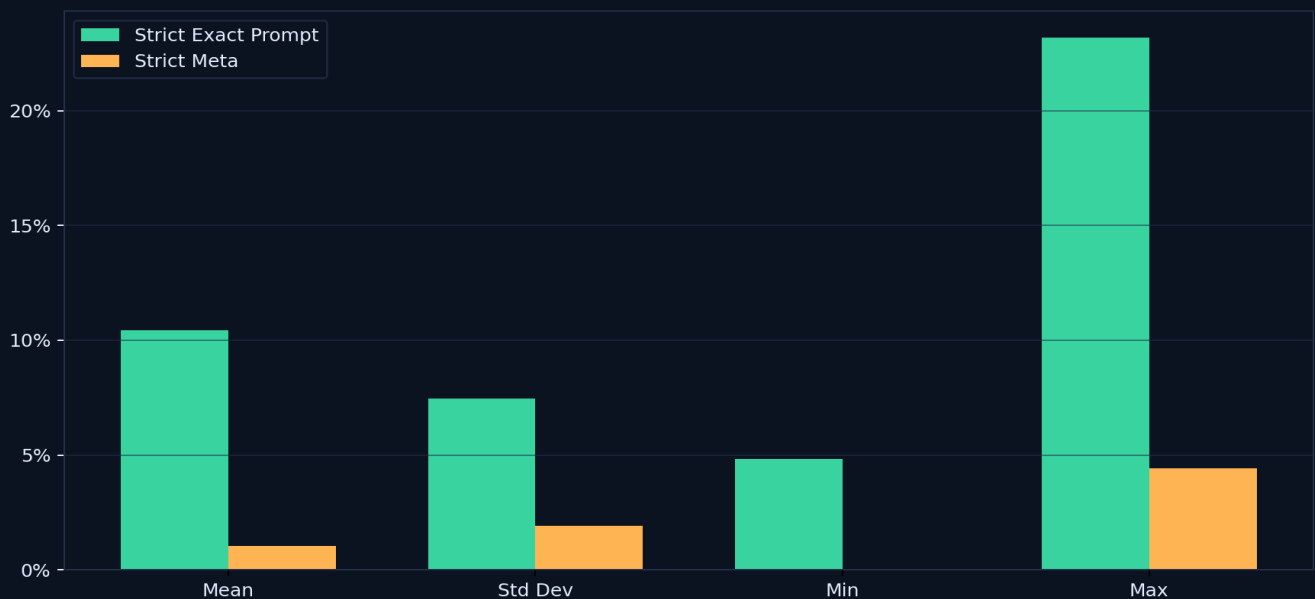

DeepSeek Top-5 Stocks: Drawdown Comparison

## Strict Aggregate Statistics

| Metric  | Strict Prompt | Strict Meta |
|---------|---------------|-------------|
| Mean    | 10.43%        | 1.06%       |
| Std Dev | 7.45%         | 1.91%       |
| Min     | 4.83%         | 0.00%       |
| Max     | 23.18%        | 4.41%       |

Strict Test Return Statistics

## Interpretation

- The earlier DeepSeek headline winners remain valid for the broad 1y/2y/3y window-averaging study.
- On the strict unseen later test slice, the exact earlier prompt variants still beat the fine-tuned news+price meta-model on return.
- The meta-model remains more defensive, but its first pass is too selective and often stays flat.
